Fair execution infrastructure for Vietnam's next Nasdaq-linked market.

SHIPPED PROTOTYPE

MGK today is a working, open-source Solana DFBA perps prototype on devnet—pre-commercial and unaudited.

THE WEB2 FAILURE

Access is lawful only through a narrow, controlled path.

- Vietnam's outward portfolio investment operates inside a restricted regulatory framework.
- Investors are exposed to unlicensed international-stock / CFD platforms.
- Private execution is difficult for partners, supervisors, and clients to verify independently.

WHY NOW

The IFC creates a licensed launch wedge.

01

Nasdaq is a founding HCMC IFC member—no MGK affiliation implied.

02

The IFC prioritizes new products, sandboxing, and digital infrastructure.

WHY ONCHAIN

Execution evidence, not regulatory arbitrage.

Deterministic auction rules and batch receipts give a licensed institution a shared, inspectable record. The chain does not replace product approval, custody, settlement, market data, or investor protection.

OPERATING MODEL	LICENSED PARTNER OWNS	MGK SUPPLIES
First customer: a licensed IFC institution. Not a direct-retail launch.	Eligibility · KYC/AML · product approval · custody · cash settlement · market data · index rights	Deterministic batch execution · separated order flow · uniform-price clearing · verifiable batch evidence

TÓM TẮT ĐIỀU HÀNH

MGK cung cấp hạ tầng khớp lệnh theo lô có thể kiểm chứng cho thành viên IFC được cấp phép. Đối tác chịu trách nhiệm pháp lý, KYC/AML, quyền chỉ số, lưu ký và thanh toán. Phiên bản hiện tại là nguyên mẫu devnet, chưa kiểm toán.

One order. Two auctions. One evidence trail.

A licensed partner embeds MGK beneath its approved product. Integration/platform license + volume-linked execution fee; commercial terms are a design-partner milestone.

01	02	03	04	05
Declare	**Collect**	**Separate**	**Clear**	**Prove**
Maker/taker intent, side, limit, quantity	Orders enter a defined batch window	Maker and taker flow remain distinct	Two independent volume-maximizing auctions	Uniform-price fill + deterministic receipt

SANDBOX DEMO

Dual-flow batch auction

MAKER BUY	×	TAKER SELL
MAKER SELL	×	TAKER BUY

Each leg selects a volume-maximizing uniform price. Price priority applies; quantity at the marginal price is allocated pro rata.

SHIPPED PROTOTYPE

Inspectable execution evidence

AUCTION LEG	UNIFORM PRICE
ASK	$21,478.25
FILLED	**ALLOCATION**
12 / 12	PRICE → PRO RATA

Local “US Tech 100 Sandbox” values are simulated. No wallet, backend, live feed, or onchain write is triggered.

ROADMAP

License first. Pilot under supervision.

Nasdaq index-linked derivatives require licensing; CME’s exclusive Nasdaq-100 futures license runs through 2039. A live named-index product is a partnership and licensing milestone.
